Cialis Medication Information

DRUG NAME: CIALIS (TADALAFIL) TABLET

USES: This medication is used to treat male sexual function problems (erection problems). Tadalafil works along with sexual stimulation to help achieve an erection.

HOW TO TAKE THIS MEDICATION: This drug is taken by mouth as needed 2 hours before sexual activity. Cialis is supplied in 5, 10 and 20 milligram doses. Take only as directed and once per 24 hours. Some of the active ingredients of Cialis can stay in your body for more than two days.

POTENTIAL SIDE EFFECTS INCLUDE: Headache, flushing, stuffy or runny nose, indigestion, stomach upset, dizziness, back pain, muscle aches or blue tinged vision. These side effects usually go away after a few hours. Although rare, you could possibly experience some temporary hearing loss; if this occurs, stop the medication and contact our office.

IMPORTANT PRECAUTIONS: CIALIS SHOULD NOT BE TAKEN BY PATIENTS WHO TAKE MEDICATIONS CONTAINING NITRATES. If you are taking ANY nitrate drug such as NITROPASTE, NITROPRESS, NOTROSTAT OR NITROGLYCERIN (S), you CANNOT use Cialis. It is safe to use alpha-blockers with this drug.

Notes: Do not share this medication with others, since they may have a problem that is not effectively treated by this drug. Use of this drug does not protect against sexually transmitted diseases, (e.g., HIV, hepatitis and gonorrhea).

Storage: Store at room temperature between 59° and 86° F (between 15° and 30° C), away from light and moisture.

Use this information in the absence of more specific or personal advice given to you by your doctor or pharmacist.
